Andrew McIlwain, Managing Director & CEO comment
“A continued focus on operational performance at Henty has seen this quarter build on the previous quarter’s production performance, delivering strong gold production and cost outcomes – again well ahead of plan.

HENTY:
- Sustained strong operational performance from Henty with quarterly production of 11,370 oz gold at a cash operating cost of $968/oz and AISC of $986/oz – continuing to deliver significantly ahead of plan.

DARGUES:
- Preparation for submission of planning modification nearing completion.

CORPORATE:
- Continued cash build with $12.3M cash at bank – above current market capitalisation;
- An additional $9.5M held in cash-backed performance bonds;
- Sustained cost reductions across the group;
- Gold put options acquired to hedge approximately 70% of forecast gold production January to June 2015 at A$1445/oz.

Summary

Importantly, this is the third quarter running where Henty has exceeded its budgeted production and financial performance. We have seen continued contribution from the high grade Read Zone continue beyond its planned depletion in 2014 and are encouraged by the tonnages and grades Darwin South stopes that have been brought into the schedule.”

Production
- Henty Gold Mine produced 11,370 oz at a cash cost $968/oz including royalties ($921/oz excluding royalties), with all-in sustaining cost (AISC) of $986/oz, (12,832 oz gold at a cash cost of $976/oz and AISC of $1028/oz in previous quarter).

Development
- Dargues technical studies have resulted in preparation of a planning modification to complete all processing operations on site. Submission will be made early in 2015.

Exploration
- Drilling conducted at Booth’s Reward.
- Best results included 3.0 m (down hole) at 6.6 g/t gold and 1m at 12.5 g/t gold.

Corporate
- Gold sales were $16.2 million during the quarter from the sale of 11,493 oz gold at an average price of $1413/oz.
- Cash at bank was $12.3 million at 31 December 2014 ($11.9 million at 30 September 2014) after payment of a number of extraordinary items including annual insurance premiums, put option premiums and employee redundancies totalling approximately $1.3 million.
BACKGROUND

Unity Mining Limited (ASX:UML) is an Australian gold producer, developer and explorer which owns and operates the Henty Gold Mine on the West Coast of Tasmania and is working to develop the Dargues Gold Mine in New South Wales. Unity is also involved in gold exploration in West Africa through its investment in GoldStone Resources Limited. Unity holds tenure over the Bendigo Goldfield in Victoria where it is pursuing the sale of its Kangaroo Flat gold plant and Bendigo exploration tenements.

The Henty Gold Mine has produced about 1.3 million ounces of gold over a 17 year period. Unity Mining has owned and operated Henty since July 2009, recently announcing a revised mine plan that will see Henty recover its remaining ore reserves then transition to care and maintenance in the second half of 2015.

The Dargues Gold Mine is located 60 km south-east of Canberra in Majors Creek near Braidwood. Majors Creek is the largest alluvial goldfield in NSW, historically producing more than 1.25 million ounces.

OPERATIONS

Safety & Environment

The Lost Time Injury Frequency Rate (LTIFR) rose to 11.8 following 2 reported lost time injuries. Similarly, the Total Reported Injury Frequency Rate rose to 32.4 as a result of 2 medically treated injuries (MTI). No restricted work injuries (RWI) were recorded.

There were no environmental incidents for the quarter.

Mining

Development

A total of 866 m of underground mine development was completed during the September quarter (991 m September 2014 qtr). Development of the known reserves is substantially complete and will be finished during the forthcoming quarter.

A total of 71,416 tonnes of ore were trucked to the ROM during the quarter (65,898 tonnes September 2014 qtr).

Mining and production in the Newton Zone ore body has seen an improvement in the reliability and predictability of grade. Ground control issues, whilst considerable, have been controlled with heightened geotechnical input.

Dargues Gold Mine development

Work to identify project optimisation and de-risking opportunities concluded with a clear benefit being delivered if full metallurgical processing and gold recovery was to be conducted on site at Dargues.

With the need to vary the existing project planning approvals and conditions to accommodate the addition of cyanide leaching, preparation of the required Environmental Assessment has commenced. This has included substantial community engagement and it is anticipated the application will be submitted within the quarter ending March 2015.

Bendigo Region

The Company entered into an agreement with the Victorian State Government to undertake pumping of the regional groundwater on commercial terms.

The agreement runs until 30 June 2015 by which time it is anticipated that a longer term solution will be implemented by the Victorian Department of Environment and Primary Industries.

This pumping activity is intended to manage the rising watertable under Bendigo and prevent uncontrolled discharge to watercourses and Rosalind Park.
EXPLORATION

Tasmanian Exploration
With the planned extraction of current known reserves at Henty, no exploration drilling activity was undertaken.

NSW Exploration
A drill program was undertaken at Unity’s Booth’s Reward property in central NSW. As was reported to the ASX on 16 December 2014, results from the six-hole 567 m RC drilling program confirmed structural continuity of the previously identified structures. The best intersection in BRRC 16 returned 20 m at 2 g/t Au, from 73-93 m, including 3 m at 6.6 g/t Au, from 73-76 m and 1 m at 12.5 g/t Au, from 92-93 m.

GOLDSTONE RESOURCES
The previously announced proposed subscription for shares by AIM-listed Stratex International Plc (‘Stratex’) to raise gross proceeds of £1.250 million was completed following shareholder approval in October. Stratex, with a shareholding of approximately 33.4% of GoldStone’s issued capital, has critically reviewed the exploration portfolio and is currently planning and prioritising the 2015 field season’s activities with an emphasis on resource addition at the Homase Project.

Unity currently holds approximately 19.3% of Goldstone and has representation on the GoldStone board with one director.

Further details are available on GoldStone’s website: www.goldstoneresources.com

CORPORATE
Gold sales were $16.2 million during the quarter from the sale of 11,493 oz gold at an average price of $1413/oz.

Cash at bank was $12.3 million at 31 December 2014 ($11.9 million at 30 September 2014).

A number of extraordinary payments were incurred during the quarter including annual insurance premiums, put option premiums, Dargues study costs, environmental bond increases and employee redundancies.

The Company also has a further $9.5 million held as cash-backed performance bonds to provide or rehabilitation liabilities.

Unity took advantage of the volatility in the A$ gold price during December 2014 to enter into gold hedging contracts on favourable terms. 15,000 oz of gold put options were acquired to hedge approximately 70% of Henty’s forecast gold production during January to June 2015. The puts provide the company with the right, but not the obligation, to sell 2500 oz of gold per month over that period at a price of A$1445/oz, while still retaining full exposure to any increase in the gold price above that level.
